

Create an external CSS file and call it in your View.

Your CSS design showcases the following:

1. **Selectors:** create different types of selectors and apply them in different type of elements like table, input, button, text elements like h1, p1
2. **Box Model:** Apply margins, paddings, and borders
3. **Positioning:** Arrange elements using CSS positioning properties.

** All group members must have their own CSS file. Every group member must have at least 5 selectors with unique designs which are not common with other group members.
